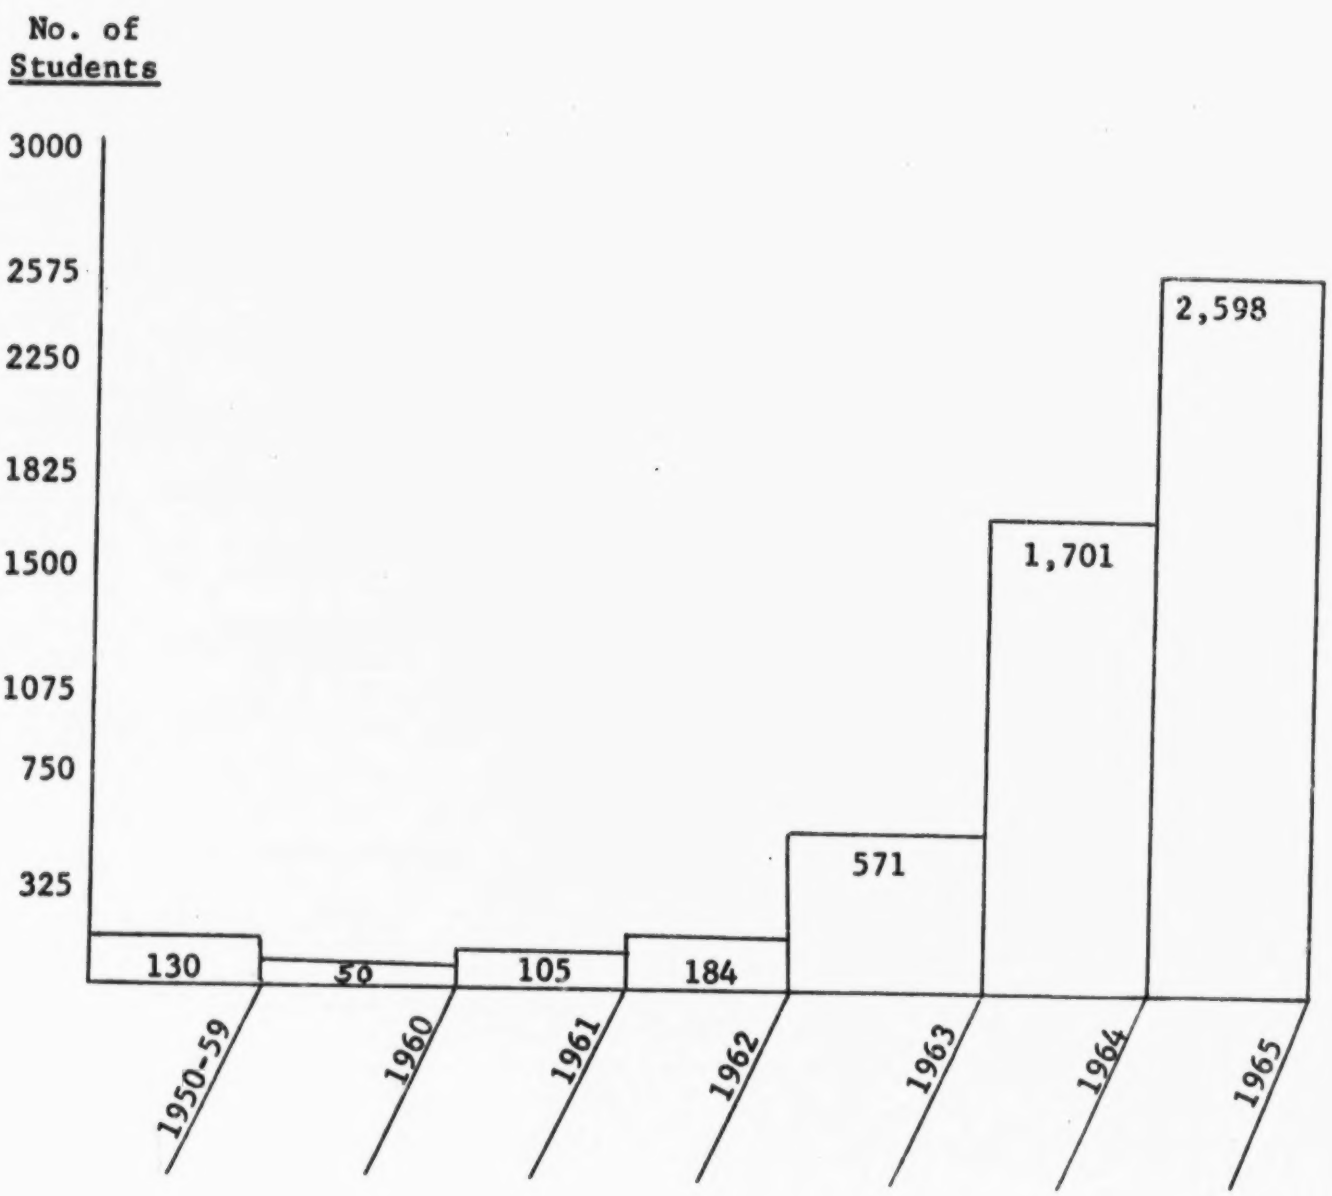
## FIRST SEMESTER OF ENROLLMENT AT DIABLO VALLEY COLLEGE



90% of our students have first enrolled at Diablo Valley College within the last three years. This statistic has been consistently stable for the past ten years. This fact questions the validity of the criticism sometimes made that community colleges often baby-sit many students for years.

The number of veterans has increased from 218 two years ago to 303 this year, but percentage-wise they have not kept pace with our total enrollments since two years ago 93.4% of our students were non-veterans compared to 94.3% this year.

A greater percentage of our student population is coming from families where the head of the household is a white collar worker than our general population. This trend has not varied significantly during the past seven years. Our pattern of work for the head of the household more closely parallels that of state colleges rather than other junior colleges.

This is the first year we have asked our students for this information and we find, surprisingly, that 43.6% of the students' fathers have attended some college. The 1960 census for Contra Costa County showed that 29% of all males 36 years of age or older had attended some college. It is not surprising to find a greater number of students attending Diablo Valley College from homes in which the father has had at least one year of college. It should, however, reinforce our commitment to encourage more students to attend the junior college whose fathers have not had a college background.
